

AxOS 10.0.4 Release Notes

Major enhancements and bugfixes

- Fixed a limitation in the DAS encryption algorithm that was impacting the DAS copying process.
- Added a check to skip *AutoVerify - Boot VM* validation for a protected device if a Local Failover VM exists for that device.
- Graceful error handling when the VSS snapshot in-use by BRC backup functionality is deleted on the protected device.
- Addressed the misleading user logout event creation for unauthorized users.
- Disabled TLS 1.1 support on the appliance, as it has been recently EOL'd.
