

Virtual Appliance Deployment in Five Steps

There are five steps to deploy the Axcient Virtual Appliance. Please follow them in the order presented to ensure a successful installation.

1

Verify that you meet the [minimum requirements](#).

2

Enable DHCP.

Note: (if you are not able to provide DHCP, [configure a static IP](#) after deploying the vApp)

3

Decide if you want to deploy the vApp using:

- » vSphere Web Client (recommended): [Installation steps](#)
- » vSphere Windows Client: [Installation steps](#)

4

Follow the [automatic registration steps](#).

5

Follow the [ESXi networking instructions](#) to allow the vApp the ability to do local failovers.

Note: The vApp troubleshooting Guide as well as our full Deployment Guide and accompanying documentation can be found online at: <http://axcient.com/enduser-documentation/>
